

Bond Information OverviewMeasure 20-142

For over 40 years, Lane Community College has served our community by:

- Training nurses, emergency medical technicians and public safety officers who serve our communities
- Strengthening our local economy by training workers, helping residents get better jobs, decreasing unemployment and providing skilled employees for local businesses
- Offering an accessible and affordable route to higher education

Bond Measure 20-142:

In order to maintain this service,
Lane Community College needs to
improve its aging school infrastructure
and update classrooms, labs, educational facilities and technology.
Bond measure 20-142, by supplying
\$83 million in funding, would allow
Lane to make these improvements.

Bond Projects include:

- Upgrade and equip science labs for academic and career training classes including Nursing and Emergency Medical Technician training
- Improve disability access for students and others who use our facilities
- Meet current fire and earthquake safety codes
- Improve classrooms for growing enrollment in high-demand programs that prepare workers with today's skills
- Remodel existing classrooms to create a Career Technical Education Center in order to expand access to vocational training for adults and local high school students

Taxpayer Protections and Cost:

The estimated annual cost of the bond is approximately 25 cents per \$1,000 of assessed value. Real property owners are currently paying about the same rate for a 1995 Lane bond. The new bond rate would be assessed in 2009, when the amount that real property owners are currently paying, will be paid off.

Expenditures are subject to annual audits. Disclosure of all spending would ensure the money is used to renovate and improve Lane. The tax costs for this measure are an estimate only.
