

There are five reports contained in this section. The first two reports present data for **all students** and the final three present data for students by **enrollment status** (part-and full-time).

Item

The items from *The Community College Student Report* appear in the left column in the same order they appear on the instrument. Because the report lists means and mean comparison information, only those items that have numerically scaled responses appear. The items measuring other educational experiences (practicum experiences, study abroad, etc.) do not appear because their response sets are categorical (yes, no, undecided). Please refer to the Frequencies Distributions for details on these items.

Variable

The name of each variable appears in the second column for easy reference to your data file and the summary statistics reports.

Class

The class appears in the third column and corresponds to the sample for which the data are reported (e.g., all students, part-time students, or full-time students).

Mean

A mean is the arithmetic average of all responses on a particular item. Means are provided for your institution, a comparison group, and for all CCSSE 2005 participants.

Sig (Statistical Significance)

A *t* test, a statistical procedure used to compare two means, is conducted between your college and comparison group as well as your college and all CCSSE 2005 participants. The statistical significance – the probability of the observed difference occurring were there truly no differences between the means – is reported. For the comparison group and CCSSE 2005 participants, mean differences that are significant at the $p < .001$ level and have an effect size greater than or equal to .2 (see below) are indicated by a single asterisk (*).

Effect Size

The actual magnitude of some item score differences may seem trivial, even though they are highly reliable and statistically significant. For this reason, CCSSE also reports the effect size (only when the value is greater than or equal to .2) associated with those item comparisons that are statistically significant. **The effect size represents the magnitude of the discrepancy in the student or institutional behavior represented by the item.**

Variable Names

The name of each variable; this is the same name contained in the second column of the **Means Summary Report: All Students**.

of respondents

The total number of respondents for your college, a comparison group, and all CCSSE 2005 colleges are listed. As a reminder, students under the age of 18, those who completed the survey more than once, those who did not indicate their enrollment status (part- or full-time), and those whose survey was out-of-range from their course packet are **excluded**.

Mean

Arithmetic average of all responses on a particular item.

Standard deviation

A statistic used as a measure of the dispersion or variation in a distribution, equal to the square root of the arithmetic mean of the squares of the deviations from the arithmetic mean; more generally, a measure of the extent to which numbers are spread around their average.

Std error of the mean

A measurement of error when a sample mean is used to estimate the mean of the population from which the sample was drawn. The standard error of the mean is computed as the standard deviation of the original population divided by the square root of the sample size.

Significance

The probability of the observed difference occurring were there truly no differences between the means. For the comparison group and CCSSE 2005 participants, mean differences that are significant at the $p < .001$ level and have an effect size greater than or equal to .2 are indicated by a single asterisk (*).

Effect size

The effect size represents the magnitude of the discrepancy in the student or institutional behavior represented by the item. For a more detailed description, see above.
