

Student Follow-Up Study

Spring 2007

2005-06 Students: *One Year Later*

Executive Summary

and

General Analysis

2007 Follow-Up Study Of 2005-06 Students

Executive Summary

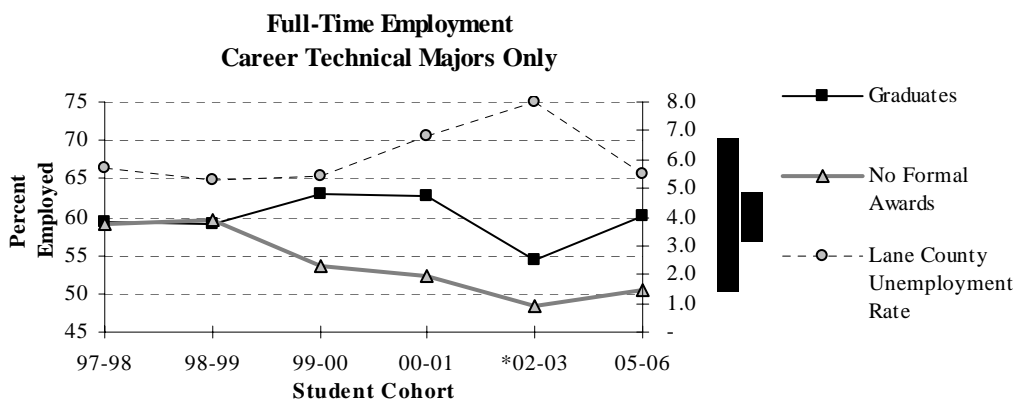

The 2007 Follow-Up Study of 2005-06 Students targeted two groups of former Lane Community College students. Surveys were mailed to all 2005-06 **graduates** (students who earned a degree or certificate). The second group contacted was **no formal award** (NFA) students. These were students who achieved a total of 60 or more credits for a degree, earned 12 or more credits during at least one term, did not earn a degree or certificate, and did not return to Lane for fall term 2006. The data were analyzed according to a respondent's completion status—graduate or NFA—and Major Grouping—a career technical (CT) major or Lower Division Collegiate (LDC) transfer major.

Demographics

- Overall, 56 percent of the respondents were in the 18 to 30 year age group. A higher percentage of females responded to this survey than did males (42% and 31% respectively).

Employment

- Overall, the current data indicate that CT graduates no longer have an advantage over NFA respondents in obtaining new jobs after their Lane education. CT graduates do, however, still maintain an advantage in obtaining related jobs, and in obtaining higher incomes.
- Over 91 percent of employed CT graduates who reported they were employed in jobs related to their fields indicated their Lane courses were “relevant” or “very relevant.”

- *No study was done for '01-02, '03-04 or '04-05. The above chart appears to suggest that a lower unemployment rate seems to correspond to a higher full-time employment rate for career technical majors and vice versa. A little over 60 percent of graduates and 50 percent of NFA career technical respondents were employed full-time.

Cooperative Education

- Approximately 89 percent of all respondents who participated in Cooperative Education rated its “value” and “relevance” as “good” or “very good.”

Lane Training

- Nearly 87 percent of former career technical students employed in jobs related to their Lane fields of study indicated Lane's overall training was “excellent” or “good.”

Transfer

- Two-thirds of the respondents with lower division transfer majors (68.6%) were attending school either full- or part-time when they completed the survey.
- Eighty-four percent of the respondents with LDC transfer majors who had transferred to a four-year college or university reported that Lane prepared them “well” or “very well” for classes at their new institutions.
- Over 81 percent of LDC transfer majors indicated they were “well” or “very well” prepared for writing tasks at a four-year school.

Reasons for Choosing Lane

- Overall, respondents indicated that cost and location were the two primary reasons they chose to attend Lane rather than another college or university.
- Thirty-six percent of all respondents indicated the likelihood of taking classes at Lane in the next two-three years was “likely” or “very likely.”

Goals and Attainment

- A majority of students achieved the objective indicated by their primary reason for attending Lane.

Number Indicating Primary Reason		Achievement	
Transfer	186	139	75% transferred.
Earn certificate/degree	108	76	70% graduated.
Prepare for a new job	119	72	61% were working in a related job, and not the same job as before attending Lane.

- Overall, no formal award respondents with transfer majors tended to leave Lane before completing a degree primarily because they transferred to another school (26.7%), accomplished what they wanted (11.9%) or had financial problems (10.9%). Fourteen percent of NFA career technical majors left Lane because of financial problems.
- Overall, three-fourths of the respondents reported they achieved their goals “very much.”

General Education Core Abilities

- The percentage of all respondents indicating ***communicating effectively*** as “very important” (88.5%) was strikingly higher than the percentage of respondents indicating that Lane’s coursework/training in this area was “very effective” (51.8%).
- Eighty-three percent of all respondents indicated that ***thinking critically*** was “very important” while just under half (48.1%) indicated that Lane coursework/training in this area was “very effective.”
- Over 61 percent of all respondents indicated that an ***understanding of the relationship between self and the community*** was “very important” while fewer than forty percent (38.2%) indicated that Lane coursework/training in this area was “very effective.”
- The percentage of respondents indicating an ***exploration of academics*** as “very important” (46.9%) was fairly similar to the percentage of respondents indicating that Lane’s coursework/training in this area was “very effective” (37.7%).

2007 Follow-Up Study of 2005-06 Students

General Analysis

The Survey Instruments

The Institutional Research, Assessment & Planning (IRAP) department has conducted a survey of former Lane students each year since 1976 except in 2003, 2005 and 2006. The survey is conducted one year after the students graduated or left Lane.

IRAP mailed two different surveys: one to transfer majors and another to career technical majors. The two surveys had ten questions in common (e.g. reasons for attending, goals, co-op education experience, educational status, and employment status). The transfer instrument asked about transferring to a four-year school and writing courses and writing task preparation for four-year schools. The career technical instrument asked more detailed questions about employment; e.g., related jobs, course relevance, and job skills. The career technical survey also asked former students about Lane training and the importance of specific job skills.

Appendix A contains the transfer survey instrument, and Appendix B contains the career technical survey instrument.

The Survey Population

The study targeted two distinct groups of students:

- **Graduates:** all students who earned a degree or certificate during the 2005-06 academic year.
- **No formal award students (NFA):** all students who attended full-time at least one term during the 2005-06 academic year, did not achieve a degree or certificate, earned at least 60 credits for a degree program while attending Lane, and did not re-enroll fall term 2006.

Methodology

In February 2007 lists of all graduates and no formal award students as defined above were extracted from Lane's student database. In April 2007, surveys were mailed to former students with USA addresses (1,646 out of 1,664 total): a transfer major survey went to transfer majors and a career technical (CT) survey went to CT students. Three weeks after surveys were mailed, telephone follow-up interviews began with all non-respondents who had local telephone numbers within the Eugene-Springfield calling area. A private outside company Advanced Marketing Research conducted the telephone interviews.

Responses from the mail-in surveys were entered into an MS Access database. Responses from the phone surveys were entered into a computer program by Advanced Marketing Research and subsequently merged with the mail-in data in MS Access. All survey responses were merged with demographic data extracted from Lane's central student database for eventual analysis.

The survey has always been conducted nine to twelve months after students graduate or leave Lane.

Response Rates

Sixteen hundred and forty-six students were contacted for this study. The overall response rate (33%) was fairly typical of recent surveys. Response rates are listed in tables one through five.

Analysis of Data

The data were analyzed using MS Access and MS Excel, microcomputer-based database and spreadsheet software applications. The general analyses used two different groupings of respondents. First, each item was analyzed using a respondent's completion status grouping (graduate or no formal award). Second, each item was analyzed by grouping of reported major (career technical major or lower division collegiate transfer major).

Separate detailed reports will be prepared for individual departments that will contain analyses of the data by career technical programs.

Limitations

The results of this survey are expressions of the attitudes, perceptions, and experiences of former students. As such, they are valid and offer valuable insights into Lane's operations even though they may reflect a different reality than that perceived by Lane faculty and staff. These sorts of data also may reflect a constructed reality in which respondents may have changed or filtered the past according to their current situations. These students' responses could also reflect an evolution in goals and expectations. For example, students who originally intended to earn a degree, but who left Lane after a year to accept a job, may report they accomplished their goals even though their original goal of earning a degree was not attained. Additionally, respondents may tend to answer questions with a "socially acceptable" response or a response that may reflect more favorably on their present situation. Research has shown that self-reported income, for example, often is one such survey item.

Tables and Graphs

Except for numerical ratings, each chart and graph consists of data for one question or item based on both Completion Status and Major Grouping. In general, only frequency tables are shown. Shading is used on the tables, usually to emphasize the most frequent response or the highest rating for a group.

Some graphs may portray data in groupings that are collapsed from the data listed in the table. Some trend data are included for selected questions.

The survey results are divided into sections of like data for easier reading (Demographics and Background, Goals and Attainment, Education and Employment Status, Co-operative Education ratings, Job Skills, and General Education). Readers are encouraged to seek relationships among data from across sections and to contact the Institutional Research, Assessment & Planning department with questions that require additional analyses of the data.

Further Reports

Analysis of student follow-up data by degree program and instructional department will be sent to the corresponding department chairs and program coordinators in the form of a Student Outcomes Report for career technical programs. These reports also will be available from Institutional Research, Assessment & Planning.

1992-93	649	268	41.3	242	90.3	199	82.2
1993-94	646	323	50.0	265	82.0	227	85.7
1994-95	619	313	50.6	262	83.7	206	78.6
1995-96	520	245	47.1	206	84.1	147	71.4
1996-97	489	211	43.1	179	84.8	147	82.1
1997-98	449	193	43.0	151	78.2	131	86.8
1998-99	412	205	49.8	162	79.0	137	84.6
1999-00	524	242	46.2	198	81.8	165	83.3
2000-01	481	191	39.7	158	82.7	126	79.7
*2002-03	536	201	37.5	164	81.6	136	82.9
2005-06	454	174	38.3	144	82.8	129	89.6
Total	7,724	3,568	46.2%	2,934	82.2%	2,436	83.0%

Example: The percentage of career technical (CT) program 2005-06 graduates who responded to this survey was 38.3%.

The percentage of 2005-06 CT graduates who were employed was 82.8%.

The percentage of responding employed CT 2005-06 graduates who had a job in a related field was 89.6%.

Note: "Employed" includes respondents working full-time, part-time, or full-time military at time of survey.

*Studies were not conducted for '01-02, '03-04 or '04-05 students.
